### DETAILED ACTION

Receipt of preliminary amendment A dated 2-6-02 and IDS dated 7-30-02 is acknowledged.

Claims 14-27 are pending.

### *Claim Rejections - 35 USC § 103*

---

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14-27 rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,335,003 to Kim et al (Kim) in view of US 5,100,658 to Bolich Jr. (Bolich).

Kim teaches polyurethane and polyureas formed from diisocyanate and at least one diol, alcohol or primary, secondary or tertiary amines and their use in cosmetic compositions. Particularly, the polyurethane containing compositions are used for hair care i.e., dressing or styling, as a fixing and film forming agents (col.1, 2 & col. 7). Polyurethane compounds suitable as hair care agents are described in (col. 5, lines 2055 and col. 8-15). Kim does not teach silicones of the instant claims.

Bolich teaches hair cosmetic compositions that provide a desirable rheology containing a primary cellulose thickener, solvent, rheological aid and distributing aid. Bolich teaches adding conditioning materials, particularly silicones (col.9-17) that include modifying silicones by adding alkyl, phenyl, amino groups, hydroxyl groups etc. Bolich also the thickening agents may include polyurethane and other cellulose containing polymers (col. 4).

Art Unit: 1615

It would have been obvious for one of an ordinary skill in the art at the time of the instant invention to add the silicone conditioning agents of Bolich such as amino modified, alkyl modified silicone etc., to the hair styling and fixing or dressing compositions containing polyurethane of Kim because Bolich teaches the modified silicone compounds are capable of being deposited on the hair efficiently, and nontoxic, nonirritating and also compatible with other components. Kim or Bolich do not specifically teach the claimed amphoteric polyurethane compounds, in particular, containing ethylene oxide units.
